NEON RIFT // RIFT PROTOCOL

Play the complete folder

The original survival shooter, expanded into a neon roguelite.

Start in three steps

1. Download and extract NEON-RIFT-v2-RIFT-PROTOCOL.zip. Keep the entire neon-rift folder together.

2. Double-click the root index.html, not legacy-v1/index.html. Keep css/ and js/ beside it. No npm, engine or build step is needed.

3. Click ENTER THE RIFT. Move, hold fire, collect XP diamonds and choose your protocol. Every fifth wave is a boss.

Phones and static hosts

For a phone, serve the folder on a static host and open it in the browser. Landscape gives more room; portrait is supported. No live website was deployed as part of this package.

Controls and the core loop

Movement and Phase Dash remain the foundation.

Desktop

WASD / arrows: move. Mouse: aim. Hold left click: fire.

Space: Phase Dash. E / Shift: equipped ability. P / Esc: pause.

Protocol cards: click, 1/2/3, arrows + Enter. R: reroll (twice per run).

Rail Rifle: hold to charge, release to fire; a short tap is a weak shot.

Touch

Left stick moves. Drag the right side to aim/fire, or hold FIRE. DASH and ABILITY are separate buttons. Lifting the movement finger must not cancel a held firing finger. Settings offers left-handed layout and touch visibility controls.

Build your run

Kills drop XP diamonds. Gems accelerate toward you inside pickup range. A level-up freezes the world and offers exactly three protocols. You have a short input lock before choosing, then resume with protection. Stack upgrades until their level cap; rarity and weapon compatibility affect offers.

Read the danger

Dashed rings and lines warn before spawns and attacks. Enemy shots are outlined diamonds; your rounds are circles. Dash invulnerability lets you cross Shock Rings. Color is supported by different enemy and pickup shapes. Muted play keeps visual warnings.

Weapons, ships and unlocks

Use LOADOUT / ARMORY before a run. Progress is earned locally.

Five weapons

PULSE CANNON - balanced automatic rounds, available at start.

NOVA SHOTGUN - eight short-range pellets; unlock on your first boss win.

RAIL RIFLE - charged piercing beam; 400 shards.

ARC BLASTER - fast darts with chain damage; 300 shards.

VOID ORB - homing direct hit plus blast; 500 shards.

Four ships and an ability

STRIKER: balanced with +10% XP. WRAITH: 200 shards, faster but less shield and shorter dash cooldown.

TITAN: 350 shards, more shield, slower movement and dash ram. ADEPT: 450 shards, lower weapon damage, shorter cooldowns and starts with Shockburst.

SHOCKBURST: 250 shards. Equip it for a radius attack, knockback and brief protection; 14-second base cooldown. Dash remains innate.

Shards and persistence

Run-end shards = floor(wave x 4 + kills / 8 + level x 2). First boss gives 50 shards; later bosses give 40. Achievements award once. Purchases, loadout, best and settings persist in the same browser/location. Saves are not cloud accounts. Moving the folder or changing hosts may use a different save origin.

What the build includes

Work groups from foundation to the final playable package.

FOUNDATION

Classic NR scripts, V1 preservation, rescaled combat, pointer ownership, touch Dash, storage recovery, cached glows and collision hashing.

PROGRESSION

XP, levels, queued cards, 28 global protocols plus 15 weapon upgrades, stat caps, combo and pooled text.

COMBAT / DIRECTOR

Five weapon patterns, four ships, Shockburst, seven enemies, affixes, six pickups, threat-budget waves and spawn warnings.

BOSS / META

Rift Overlord, five attacks, phases, recurring scaling/variant, boss rewards, summary, local armory, 12 achievements, archives and settings.

WORLD / POLISH

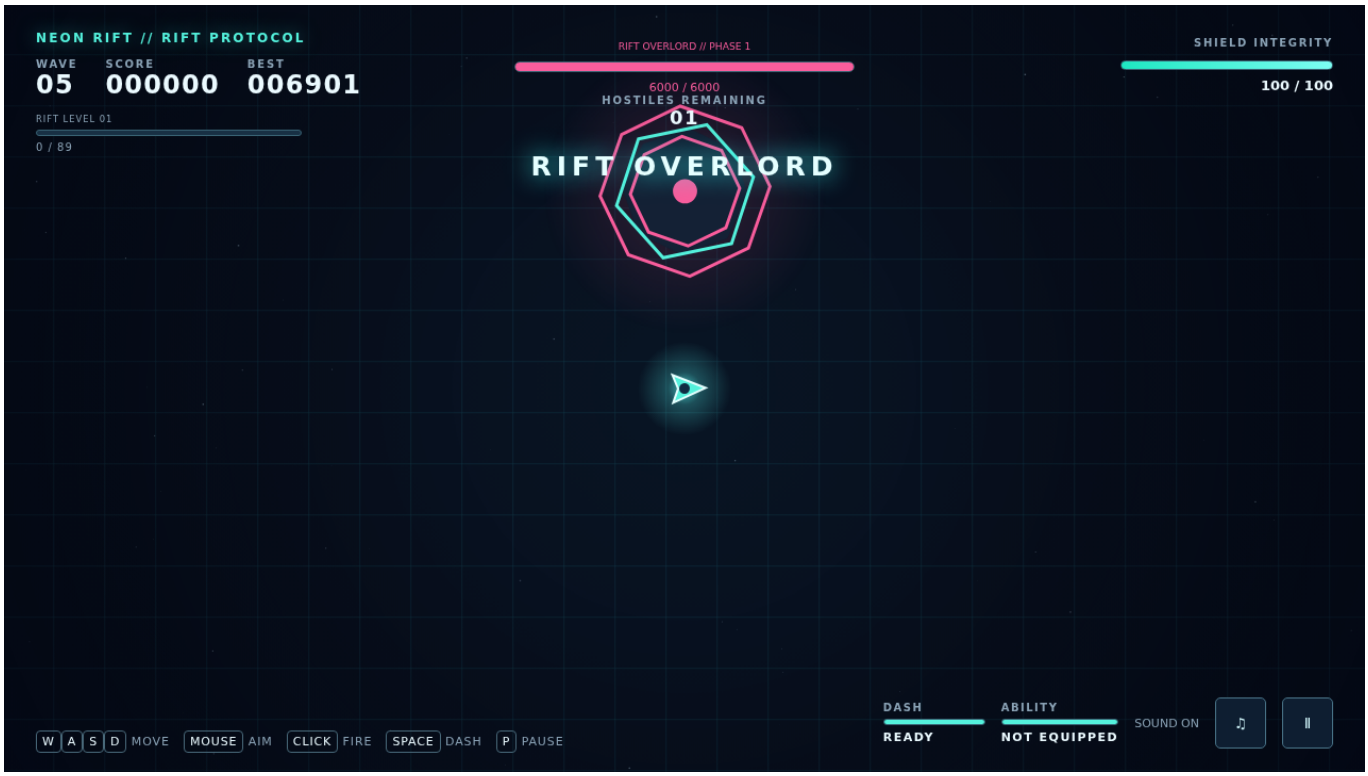

Four themes, five events, Mine/Rift Zone/Drag Field, procedural sound/music, quality tiers, reduced motion and responsive menus.

QA / DOCS

Browser suites, controller-driven run, accelerated soak, source README/changelog, saved test results and this guide.

Boss combat and tuning

An arena-scale encounter every fifth wave.

Rift Overlord

Bullet Ring, Laser Sweep, Rift Summon, Charge and Shock Ring each have a visible warning. At 50% and 20% HP the boss changes phase, briefly becomes protected, clears enemy shots and drops a shield cell. The first win unlocks Nova; wins give XP, score, shards, powerups, shield repair and a Rare-or-better protocol choice.

Starting values were tuned

The brief allows tuning through data. Arc direct damage was raised from 9 to 14 and Void from 20 to 44 because the original table conflicted with its own single-target balance goal. Idealized base-weapon boss tests took about 65-84 seconds. Upgraded builds can win faster. Exact +/-15% sustained weapon DPS is not claimed as verified.

Testing and remaining limits

Read docs/QA.md in the folder for the full verification record.

Executed checks

Chrome file://: 33/33 core checks and 25/25 effect/input checks. Final suites had no page/console errors and no external network requests.

Firefox file://: boot/play and integrated smoke passed. Chrome static hosting and gesture-started audio passed.

Controller-driven run reached wave 11, level 11 and two boss wins using real shot/XP/wave logic with invincibility to isolate progression.

Accelerated near-30-minute game-time soak reached wave 59 without NaNs or cap breaches. It is not a 30-minute wall-clock memory/audio test.

Inspected actual screenshots on desktop, touch portrait/landscape, ultrawide and all four arena themes. Headless desktop frame callbacks sampled about 60-61/s.

Not yet verified

Safari/WebKit could not launch in the test environment. Edge, physical phones, a real-time heap/audio soak, every possible avoidance route and the exact sustained-DPS target remain unverified. Some effects/audio cues are simpler than the full brief; some tuning constants remain inline. See QA notes instead of assuming every checklist box is ticked.

Not part of this release

Optional COULD features: additional abilities, permanent nodes, a second boss, save export/import, auto-aim and Laser Grid. No deploy, GitHub push or Git tags were made. Play-test the package and report the exact error or control issue if anything breaks.
