Start playing

Run the game

Extract the ZIP or clone the repository. Open root index.html in a desktop browser. No game engine, package installation, API key or build command is needed. Keep css/ and js/ beside index.html. For phone play, serve the folder on a static host or a local web server. Python users can run python3 -m http.server 8000 and open localhost:8000.

Controls

WASD or arrows move. Mouse aims, held left click fires. Space uses Phase Dash. E or Shift activates your equipped ability. P or Escape pauses. Choose upgrades with click or 1/2/3. Rail Rifle is hold-to-charge, release-to-fire. Touch uses a left stick, right-side aim/fire, and separate DASH and ABILITY buttons.

The run

Survive waves, collect XP diamonds and choose one of three protocols at each level-up. A boss arrives every fifth wave. Dash through danger, watch attack warnings, then claim a reward and continue. Run-end rewards buy ships, weapons, arenas and permanent talents.

Build, save and review

Weapon evolutions

Each of five weapons has one evolved form. Raise its weapon-upgrade level to 5 and take its catalyst: Pulse + Rapid Fire = Hyper Pulse; Nova + Explosive Rounds = Supernova; Arc + Chain Lightning = Tesla Storm; Rail + Critical Core = Singularity Lance; Void + Homing Rounds = Event Horizon. An evolution becomes eligible in later three-card offers, not an automatic unlock.

Core Matrix

Open Loadout / Armory > Core Matrix. Spend Rift Shards on offense, defense and utility ranks. Each next node needs rank 1 in the previous node. Respec refunds purchase costs. Elite Radar adds 15% relative elite-affix chance and one shard per elite kill per rank; alive-elite caps still apply.

Save backup and restore

Progress is local to the browser and file location/origin, not a cloud account. Settings > Export Save copies or downloads NRSAVE1 text. Import Save checks checksum/schema and replaces progress. Keep a backup before restoring. Corrupt or invalid talent data is removed/clamped. The checksum detects accidental damage, not malicious editing.

Touch and accessibility settings

Choose touch controls, left-handed layout, aim assistance off/low/strong, reduced motion, particles, shake and audio levels in Settings. Portrait and landscape layouts are supported. Real phone performance and assistive-technology use still need device testing.

What was tested

83 checks across core, effects/input and new regression suites passed in Chrome, plus targeted tests, five evolution smoke checks and a scripted wave-11 run. An accelerated game-time soak found no invalid positions. These do not guarantee every browser/device, human difficulty or a real-time memory/audio soak. See docs/QA.md for exact methods and remaining limits.
